

Modeling Side Loads in 4-D

James Robinson, Ph D. (Kepler Software Engineering, Ltd)

Tom Mills

2023 International Sucker Rod Pumping Workshop
Aug 28-31, 2023. Midland TX

Historical Modeling for Vertical Wells

$$\frac{\delta^2 u(x,t)}{\delta t^2} = a^2 \frac{\delta^2 u(x,t)}{\delta x^2} - \frac{\pi a v}{2L} \frac{\delta u(x,t)}{\delta t}$$

► Gibbs

- Considered:
 - Elasticity of the Rods
 - Viscous Damping
- Simplified:
 - Gravitational forces
 - Buoyant forces
- Ignored:
 - Coulomb friction

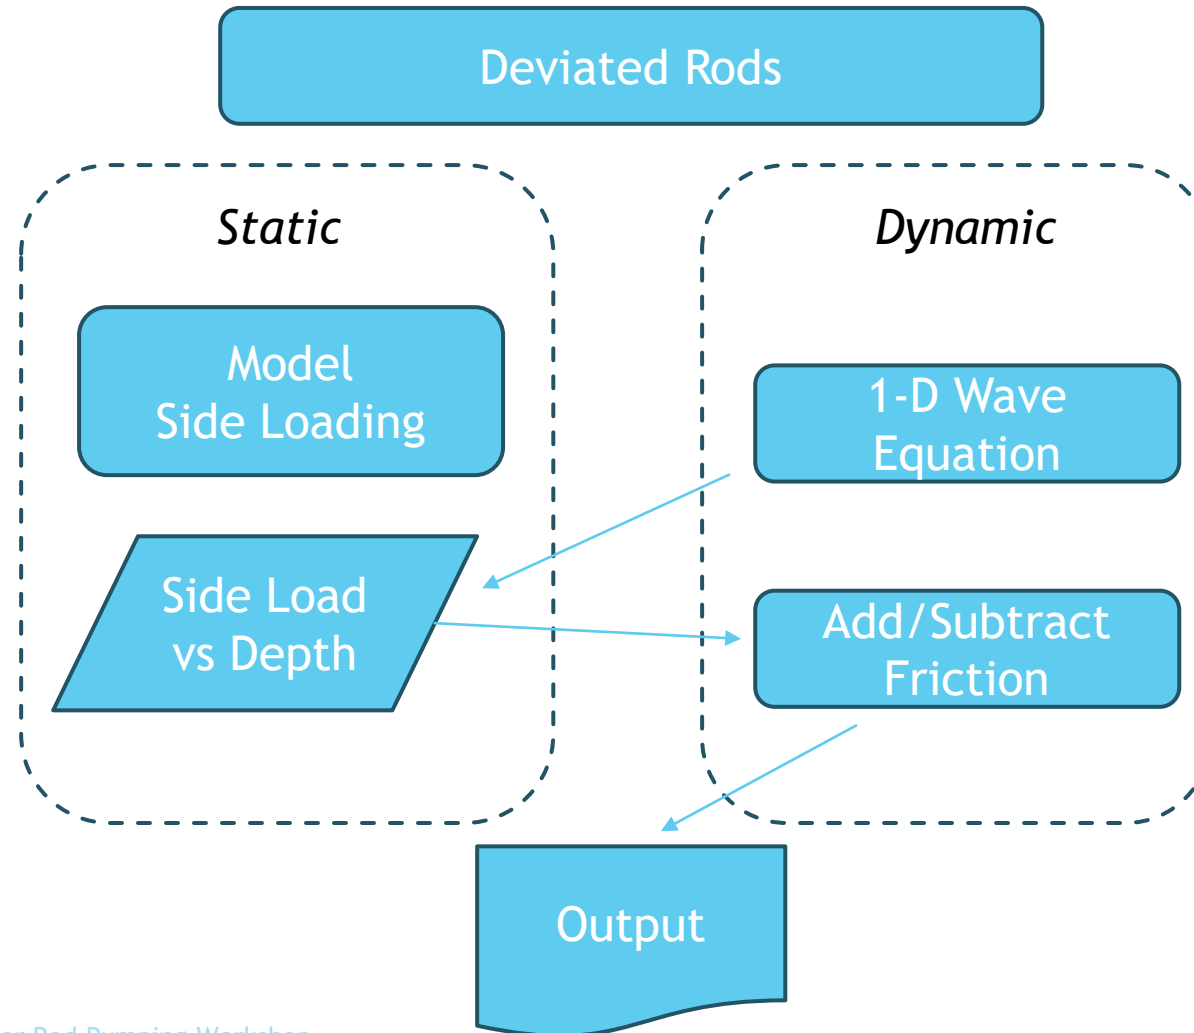

Non-vertical Wells

- ▶ Gravitational Forces:
 - ▶ Gravity/Weight pressing rod string against tubing wall
- ▶ Buoyant Forces:
 - ▶ Unbalanced forces caused by hydrostatic fluid pressure
 - ▶ Induce additional rod/tubing interaction

“Side Loading”/Reaction Forces

Traditional Approach

Customary Side Load Presentation

- ▶ 2 spatial dimensions
- ▶ Static (no time dimension)

More Modern Approach

- ▶ 3-D Finite element modeling (FEM) of the sucker rod string
 - ▶ Treat each rod as a cylindrical “bar element” with 6 degrees of freedom at each end
- ▶ Consider Gravitational Forces in 3-D
- ▶ Consider Buoyancy as an unbalanced force acting in 3-D
- ▶ Parameters are calculated at each time step (4-D)

ROD3D

- ▶ 3-D, dynamic FEM specifically formulated to address deviated sucker rods
- ▶ Full consideration for the specific “problem”
- ▶ Easy to configure
- ▶ Fast run times

ROD3D - Reaction Forces in 3D + Time

Does it make a difference?

Conclusions

- ▶ The dynamic nature of the rod string forces at various depths and times throughout the stroke induce dynamic side loading
- ▶ These changes are significant both for the magnitude and range of the PR loads, but also for the stroke length
- ▶ Therefore, sucker rod modeling software must consider dynamic - rather than static - side loading
- ▶ Finite element modeling can account for this *4-D side loading*
- ▶ Special FEM formulations - like ROD3D - deliver improved understanding of sucker rod systems

Thank You
